Beyond the Box Alexandra Rutherford, 2009-05-09 B.F. Skinner (1904-1990) is one of the most famous and influential figures in twentieth century psychology. A best-selling author, inventor, and social commentator, Skinner was both a renowned scientist and a public intellectual known for his controversial theories of human behavior. *Beyond the Box* is the first full-length study of the ways in which Skinner's ideas left the laboratory to become part of the post-war public's everyday lives, and chronicles both the enthusiasm and caution with which this process was received. Using selected case studies, Alexandra Rutherford provides a fascinating account of Skinner and his acolytes' attempts to weave their technology of human behavior into the politically turbulent fabric of 1950s-70s American life. To detail their innovative methods, Rutherford uses extensive archival materials and interviews to study the Skinnerians' creation of human behavior laboratories, management programs for juvenile delinquents, psychiatric wards, and prisons, as well as their influence on the self-help industry with popular books on how to quit smoking, lose weight, and be more assertive. A remarkable look at a post-war scientific and technological revolution, *Beyond the Box* is a rewarding study of how behavioral theories met real-life

problems, and the ways in which Skinner and his followers continue to influence the present.

Elementary Chemical Reactor Analysis Rutherford Aris, 2013-09-03 Elementary Chemical Reactor Analysis focuses on the processes, reactions, methodologies, and approaches involved in chemical reactor analysis, including stoichiometry, adiabatic reactors, external mass transfer, and thermochemistry. The publication first takes a look at stoichiometry and thermochemistry and chemical equilibrium. Topics include heat of formation and reaction, measurement of quantity and its change by reaction, concentration changes with a single reaction, rate of generation of heat by reaction, and equilibrium of simultaneous and heterogeneous reactions. The manuscript then offers information on reaction rates and the progress of reaction in time. Discussions focus on systems of first order reactions, concurrent reactions of low order, general irreversible reaction, variation of reaction rate with extent and temperature, and heterogeneous reaction rate expressions. The book examines the interaction of chemical and physical rate processes, continuous flow stirred tank reactor, and adiabatic reactors. Concerns include multistage adiabatic reactors, adiabatic stirred tank, stability and control of the steady state, mixing in the reactor, effective reaction rate expressions, and external mass transfer. The publication is a dependable reference for readers interested in chemical reactor analysis.
